     * If "Corporate event" is NOT selected, then show question "Billing Address" (ID `id_5`). (Condition ID: `1709354236806`)
     * If "Food Truck" is selected, then skip to Page 20 (Totals page). (Condition ID: `1721716497482`)

## Page 2: Contact and Event Details

* **Conditional Logic (Page Level):**

* If "Event Type?" (ID `id_10`) is "Corporate event", then show question "Company Name" (ID `id_14`). (Condition ID: `1705833047223`)

1. **Question:** Company Name
   * **Type:** Textbox (control_textbox)
   * **ID:** `id_14`
   * **Initially Hidden:** Yes
   * **Conditional Logic (Display):** Shown if "Event Type?" (ID `id_10`) is "Corporate event". (Condition ID: `1705833047223`)

2. **Question:** Billing Address
   * **Type:** Address (control_address)
   * **ID:** `id_5`
   * **Sub-labels:** Street Address, Street Address Line 2, City, State / Province, Postal / Zip Code
   * **Initially Hidden:** Yes
   * **Conditional Logic (Display):** Shown if "Event Type?" (ID `id_10`) is NOT "Corporate event". (Condition ID: `1709354236806`)

* **Conditional Logic (Page Navigation):** Each option likely leads to a specific page for that package's detailed selections (Pages 28-31).

---

This covers the main structure and conditional logic. Many questions are matrix types where users select quantities or options for listed items. The exact options within each matrix row (e.g., specific meats for a Kebab package) are detailed in the HTML. The conditions primarily control visibility of subsequent questions or entire pages based on previous selections.

This extraction provides a comprehensive overview of the form's questions, their options, and the conditional logic that governs their display and behavior. I've focused on the structure and conditions as requested, avoiding the calculation formulas. The min/max selection details are also included where specified in the HTML.Okay, I've analyzed the HTML and JavaScript from the files you uploaded. I'll provide a detailed breakdown of the form's questions, options, and conditional logic.

Here is the extracted structure:

*The subsequent pages (Taco Fiesta, American BBQ, A Taste of Greece, Kebab Party, A Taste of Italy, Custom Menu Pages, Vegan Menu, Hor d'oeuvres, Beverage Service, Equipment Rentals, Desserts, Final Summary) follow a similar pattern of questions with specific options and conditional logic based on package selections or previous

answers. The detailed options for each menu item (e.g., specific meats, sides, salads) are listed within their respective checkbox or matrix questions in the HTML.*

*Key conditional patterns observed:*
* **Package Selection:** Choosing a package (Bronze, Silver, Gold, Diamond) under a main menu (e.g., Taco Fiesta) reveals the specific protein, side, and salad choices for that package.
* **Menu Navigation (Custom Menu):** A series of "Which Category would you like to choose from next?" questions (IDs `id_459`, `id_466`, `id_473`, `id_479`, `id_485`, `id_528`, `id_529`, `id_530`, `id_531`, `id_547`) guide the user through different custom menu sections, skipping to the relevant page.
* **Appetizers/Desserts/Beverages/Equipment:** Yes/No questions control whether subsequent detailed selection pages for these items are shown or skipped.
* **Guest Count Restrictions:** Options for "Bronze" packages in various menus are disabled if the guest count (ID `id_19`) is less than 50. Certain tasting-related text blocks are hidden if guest count is below 75 or 100.
* **Service Style Impact:** The choice of "Service Style" (ID `id_39`) can affect which service fee notes are displayed and is used in labor calculations.
* **Bartending Service:** Choices under "What type of Bartending Service are you requesting?" (ID `id_721`) and subsequent "What we are serving" (IDs `id_582`, `id_722`) determine which detailed bar-related questions (liquor quality, additional cocktails, equipment) are shown.
